DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - Claims 1-8, drawn to a linear bearing assembly, classified in class 384, subclass 42.
 - II. Claims 9-17, drawn to methods of adjusting bearing pads, classified in class 29, subclass 898.03.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the device can be adjusted by a method not involving a guide rail.
- 3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 4. A telephone call was made to Joseph Walkowski on October 31, 2005 to request an oral election to the above restriction requirement, but did not result in an election being made.
